Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A.Molecule type: protein
A.Residues: 1-289 <FRA>
A.Molecule type: protein
A.Residues: 1-289 <FRA>
A.Note: the molecule is a dimer linked by 12 disulfide bonds; it has an extra interchain
A.Note: this protein lacks most of the V region and all of the CH1 region. Residue 12 cc
A.Note: the sequence of residues 42-76 was taken from the reference that follows
A.Note: the sequence of residues 42-76 was taken from the reference that follows
B. Franklin, E.C.
A.Note: the sequence of residues 42-76 was taken from the reference that follows
A.Title: Primary structure of the 'hinge' region of human IgG3. Probable quadruplication
A.Reference number: A92219; MUID:77118561
A.Recession: A92219
A.Accession: A92219

A; Accession: A93915
A; Accession: A93915
A; Molecule type: mRNA
A; Residues: 12-70;72-114;116-125, E', 127-133, 'L', 135-136, 'E', 138, 'Y', 140-154, 'D', 156-157
A; Note: a carboxyl-terminal Lys is removed posttranslationally
A; Note: this sequence may represent an allelic form or another gamma chain subclass
C; Comment: The heavy chain disease protein Wis is shown.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ig gamma-3 heavy chain disease proteins - human C;Species: Homo sapiens (man) (c;Species: Homo sapiens (man) (c;Species: Homo sapiens (man) (c;Date: 31-Dec-1979 #sequence-revision 23-oct-1981 #text_change 16-Jul-1999 (c;Accession: A90442; A92219; A90198; A93915; A02149 (c;Accession: A90442; A92219; A90198; A93915; A02149 (c;Franklin, E.C. B) Coliveira, B): Lamm, M.E.
B) Contents an disulfide bridges of guinea pig gamma-2- immunoglobulin.
A) Freference number: A09354; MUID:71058474
A) Reference number: A09354; MUID:71058474
A) Rote: Cys-105, Cys-107, and Cys-110 form inter-heavy chain bonds
A) Note: Cys-105, Cys-107, and Cys-110 form inter-heavy chain bonds
C) Comment: This chain was isolated from pooled serum of strain 13 inbred guinea pigs.
C) Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kap and isulfide bonds: In some cases, such as IgA and IgM, the subunits associate into Ia C) Superfamily: immunoglobulin immunoglobulin heterotetramer; immunoglobulin
E;21-81,00main: immunoglobulin homology cimi>

USED TO TREAT MODERATE TO SERVERE RHEUMATOID ARTHRITIS (RA). ENBREL CONSIST OF THE EXTRACELLULAR LIGAND-BINDING PORTION OF THERZ LINKED TO AN IMMUGLOBULIN FC CHAIN. IT BINDS TO TNF-ALPHA AND BLOCKS ITS INTERACTIONS WITH RECEPPORS.
SIMILARITY: CONTAINS A LA-NGFR/TNFR-TYPE CYSTEINE-RICH REGION. DATABASE: NAME-PROW, NOTE-CD Guide CD120b entry;

- FUNCTION: RECEPTOR FOR A CYTOKINE LIGAND KNOWN AS CD40L.
-!- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
-!- SIMILARITY: CONTAINS A LA-NGFR/TNFR-TYPE CYSTEINE-RICH REGION.
                                                                                                                                                                                                                                                                                                                                  Mammalia; Eutheria; Rodentia; Sciurognathi; Muridae; Murinae; Mus

Toloning and characterization of the bovine Fas.";

DNA Cell Biol. 15:227-234(1996).

-!- FUNCTION: RECEPTOR FOR A CYTOKINE LIGAND KNOWN AS FASL. THE BADATOR MOLECULE FADD RECRUITS CASPASE-8 TO THE ACTIVATED RECEPTOR. THE RESULTING AGGREGATE CALLED THE DEATH-INDUCING SIGNALING COMPLEX (DISC) PERFORMS CASPASE-8 PROTEOLYTIC ACTIVATION. ACTIVE CASPASE-8 INITIATES THE SUBSEQUENT CASCADE OF CASPASES (ASPARTATE-SPECIFIC CYSTEINE PROTEOLYTING APOPTOSIS. FAS-WEDIATED APOPTOSIS MAY HAVE A ROLE IN THE INDUCTION OF PERIPHERAL TOLERANCE, IN THE ANTIGEN-STHULATED

SIGILDE OF MATURE T-CELLS, OR BOTH (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     VKQECNRTHNRVCECEEGRYLEIEFCLKHRSCPPGS----GVVQAGTPERNTVCKKCPDG 148
